Track & Trace

Locating and protecting people and assets

GAP operates around the clock, securely recording hundreds of thousands of GPS positions. From nuclear waste container shipments to extreme sportsmen, we help ensure people and assets are safe and can be traced.

GAP 'track and trace' is a comprehensive mapping and tracking platform that supports an ever-expanding range of communications devices across the popular satellite providers as well as terrestrial GSM networks.

With our global platform and easy-to-use web portal, you can have the peace of mind of knowing where your assets are, in near real-time, anywhere in the world.

The GAP 'track and trace' service comes out-of-the-box with many features, including detailed maps, tracks and history as standard. You have the option to keep it really simple or choose to benefit from the many advanced features that GAP has to offer.

Global Messaging Software & Services

GAP Track & Trace

GAP 'track and trace' provides all the features and functionality required via a simple web-based user interface. Delivered as a Software as a Service (SaaS) solution, it enables you to access your account anywhere with a connection to the internet.

Provided as standard with your logo and colour scheme, we also offer a full white labelling and customisation option to suit your specific needs and brand.

Contact our team and we'd be delighted to provision a trial account for you. We'll help you to add your various devices and you can experience how easy it is to consolidate all your track, trace and management operations in one place.

Device integration

GAP already supports a number of popular satellite and terrestrial communication devices. It has been designed to enable rapid integration of any device into the platform, so you can benefit from all of the advanced messaging features and portal services without having to develop and manage your own software and infrastructure.

If you have chosen your device and we don't already support it on GAP, our development team can usually have it integrated within a week. If you're a manufacturer with a new device, why not integrate it with GAP for an added value service to your customers? If you're not sure which device will suit your requirements, we have a wealth of experience and can help to find the device for you.

Our experience

GAP is used daily across the globe to connect and protect people and assets in various scenarios.

Vehicle track & trace – GAP is used to track vehicles worldwide. From trucks transporting low grade nuclear waste to construction machinery in Canada.

Vessel track & trace – GAP is the power behind the Royal National Lifeboat Institution's commercial fishing monitoring and safety system, and currently monitors thousands of users right across the globe.

People track & trace – GAP is used to keep track of people in many different ways. From people with dangerous jobs, such as security and police, to people climbing Mount Everest or even running from LA to Boston to raise money for charity. Whatever the requirements, GAP has it covered.

Benefits

- Satellite & GSM platform ensures 100% coverage of the planet
